

With extra safety features that go beyond the mandatory requirements, this GFCI thermostat scores top marks on safety.

Wiring errors are fatal in bathrooms or other wet room environments. That's why our thermostat has two relays as extra protection. Grounded Neutral Detection benefits both you and your customer in case of a defective installation. Another strong feature is our UL RECOGNIZED robust glass coated sensor providing further protection.

The installation is remarkably easy - just fasten the wires in the screw terminals, set the time and date, and you're ready. The factory-set program and adaptive control make sure you get the right temperature at the right time.

This dual voltage 120V/240V thermostat benefits your business and simplifies ordering and stock control as well.

**It's safe**

- Two relays for extra protection against wiring errors
- C-UL U.S. LISTED GFCI thermostat
- UL RECOGNIZED waterproof glass-coated sensor

**It's easy and user-friendly**

- Screw terminals save you time and money
